EDUCATION

IIT Jodhpur

BS Applied AI & Data Science

CGPA: 8.28 / 10 | Sem 3

ALLEN Career Institute; S.G.R. Public School

Class XII | Sikar, Rajasthan | 2024–25

JNV, Sandhuan

Class XI | Ropar, Punjab | 2023–24

JNV, Kikarwala Roopa

Class VI–X | Fazilka, Punjab | 2018–23

SKILLS

- Python, SQL, Kotlin
- Machine Learning & Deep Learning
- Neural Networks, NLP
- Jetpack Compose, Android Studio
- Gemini Flash 3.5, Google AI Studio
- Git, GitHub, Power BI, Tableau

COURSEWORK

Algorithmic Thinking, Data Analytics, Statistics & Probability, Linear Algebra, Numerical Analysis, AI Fundamentals

PARAS

AI/ML Engineer | BS Applied AI & Data Science Student, IIT Jodhpur

PROFESSIONAL SUMMARY

Applied AI and Android Developer with a strong foundation in Data Science from the Indian Institute of Technology (IIT) Jodhpur. Experienced in deploying Generative AI models into production Android applications using Kotlin, Jetpack Compose, and Gemini Flash 3.5. Skilled in building end-to-end machine learning architectures from first principles, prompt engineering, and data analysis.

PROJECTS

AI Resume Analyzer (Android Application)

2025

- Developed an AI-powered Android application using Kotlin, Jetpack Compose, Gemini Flash 3.5, and Google AI Studio to automate resume evaluation.
- Engineered an asynchronous JSON parsing layer in Kotlin, delivering ATS compatibility feedback in under 1.5 seconds.
- Optimized prompt architecture to eliminate LLM hallucinations, achieving 95%+ accuracy in skill-gap matching.
- Implemented ATS compatibility scoring, resume-to-job matching, and AI-generated actionable recommendations.

Neural Network Framework from First Principles

2026

- Programming an object-oriented deep learning library from scratch in pure Python using NumPy.
- Implementing forward propagation, backpropagation, gradient descent, custom activations, and tensor operations.

CodeBridge — AI-Powered Legacy Code Migration Tool

2026

- Built a VS Code extension that automates legacy codebase modernization using GPT-4o and AST-based semantic parsing.
- Architected the extension frontend in TypeScript (VS Code Extension API) and backend in Python for AST parsing and chunked LLM translation.
- Prevented LLM context loss and hallucination by breaking codebases into isolated semantic chunks before translation.

Job Pre-Screening Bot — AI Hiring Assistant

2025

- Designed and deployed an AI-powered hiring chatbot (HTML, CSS, JavaScript, Landbot) to conduct candidate screening conversations.
- Built a responsive glassmorphism landing page enabling one-click, chat-based job applications.
